

As requested by Melinda Torres (TCEQ), I talked with Sean Ables at TCEQ regarding these data to that already in RM. Attached is a spreadsheet of all water systems with their corresponding County names and Water System Types.

I did not filter out any county (easier) since I had no idea what counties Texas already had loaded.

The Update key is the PWS ID column which will match that in RM.

Thanks,

Mark

Subject: Re: RM and Texas Data

Nic,
Will you please coordinate with TCEQ to see if they are agreeable to having us populate these fields? Those fields are already in RM but they are currently blank. Having these fields will help us out if/when we are asked to report our post landfall.

Thanks

Eric,

The data we need added are for the Type column which corresponds to the PWS Type (e.g., CWS – community water system, TNCWS – transient non-community, etc) and the County column.

I can provide all that data that can be used to update the current data based on the water system ID which is the ID column in RM.

Thanks

Mark

Subject: RM and Texas Data

Eric,

Do you know where the Drinking Water data for Texas came from? Do we need to do a refresh so we can get county names in there? I am not sure why that useful element is not there. I do have a query to extract the data from SDWIS ready to go if you and Texas are good with updating the information. I can extract for a specific set of counties also.

Thanks,

Mark McCasland
